

## The COVID-19 coronavirus has mutated to an aerosol that passes through surgical masks and paper N95 filters

That means it spreads as a fine vapor cloud like highly infectious Tuberculosis and the Measles. That cloud can hang in the air for hours and spread hundreds of feet. So much for social distancing and paper masks. *Clinical Infectious Diseases researchers argue that studies on SARS-CoV-2 and other viruses strongly suggest that airborne transmission of SARS-CoV-2 is an important pathway. Morawska, L. & Milton, D. Clin. Infect. Dis.*

As you are seeing record numbers of people are testing positive called the positivity rate for the coronavirus. Millions are infected, hundreds of thousands are being hospitalized and tens of thousands are dying. In the US alone Johns Hopkins University's count, the nation's cumulative number of cases increased to 4,286,663. The data showed virus-related fatalities stand at 147,588. And it will only get worse as the coronavirus spreads like a dark cloud enveloping the world.

Here is how this aerosol danger came about. Doctors and nurses were coming down with the mutated coronavirus at an alarming rate. COVID-19 cases among US health care workers top 62,000, CDC reports far more cases to be attributed to mistakes or fatigue. It was discovered the Plague went through the N95 masks and also can easily infect your body through your eyes. You may notice you are seeing all health care professionals starting to wear face shields as per new guidelines updated by the CDC.

There is no vaccine for now (if we ever get an effective one) and the ones in Phase 3 clinical study will not even start distribution until next year. By the time it comes to you it will be a year or more. So that means you need to protect yourself especially if you're over 50 years old.

Here is the horror show. Besides spreading around massive amounts of bleach and hand sanitizer. There is a cure, a medicine if you will. The cure is called isolation and the name of the medicine is lock down. Unfortunately you just can't do it all the time. How long can you isolate yourself from family and friends?

Suppose there was a way to protect yourself and still not severely limiting your social contacts?

## **There is the technology to protect yourself available today!**

Which means you need to up your game as the virus mutates and our knowledge base expands.

Here is the solution. Health care professionals are going to full face masks with a very special filter that can protect you 100% from the new highly contagious aerosol form of the coronavirus.

As you can see on the right it's a full face mask with an air pump on your belt. Using a high tech cartridge filter. Eliminating the surgical masks and N95 paper filters that cannot stop the aerosol spread of the coronavirus.

This is not feasible for you in day to day use. The picture on the right is the actual photo from the CDC new recommendations for the medical community. Soon you will see all medical personnel with the full face masks and specialized cartridge filter respirators. The only delay is lack of funds. And eventually they will recommend you move away from the N95 paper respirator. Which at one time they told the public they were for health care professionals only. Soon when supplies are available they will move all who can afford them to the new cartridge filtration system.

## **The good news is you do not have to wait.**

There is a system developed by the Israelis. That makes this technology available to everyone. We have bought up the last remaining supplies of the Israeli masks and the High tech filters. When you can find a vendor they are back ordering supplies to September or October! Israel has the most experience in respirator mask technology in the world. Under constant threat of

chemical, nerve gas, germ warfare and bio weapons attack they have developed systems to protect their entire population. They have masks for their people from 8 months to eighty years old. Kids train with masks at school. And their technology is the most advanced in the world. Especially when it comes to bio-terror attacks.

## Your N95 PAPER mask no longer protects you.

It is expensive and it is really not reusable. After a month of throwing them away (to reuse them is a death sentence) you could buy a reusable silicone rubber food grade respirator. With the highest level filtration cartridge known to man. This high tech cartridge is the only one that can keep the aerosol version of the mutated virus out of your body. The Mutated coronavirus is causing the second wave of infections spreading around the world. N95 paper masks are useless. They can stop water droplets, not the fine aerosol mist that is causing the second wave of infections.

Because of advanced technology you can guarantee the coronavirus will not pass through your filter mask. You want to know why they call it the N95 mask? Because by design it only filters out 95% OF WATER DROPLETS CONTAINING THE CORONAVIRUS. AND zero as in NONE of the vapor mist aerosol infections that are ravaging people around the world. The aerosol mist is too fine and passes through the N95 like water through a sieve.

There are two breakthroughs. The first is the Israeli NATO 40 MM half mask. It is made of medical grade silicone rubber which means to disinfect it after use you simply rub it down with alcohol. Since it is a half mask it's not as bulky as the hospital or military version. And as you wear our mask you will not draw attention to yourself looking like a special forces wanna be. This mask is very comfortable and easy to wear for long periods of time. And MUCH more comfortable than a paper mask

This is a special designed respirator that seals around the nose and mouth. It takes the 40mm P3 R state of the art canister filter. This is the ONLY filter that can protect you from the reduced particle size of the mutated aerosol corona. This is what we believe is killing people in record breaking numbers on a daily basis.

The P3 R filter is cutting-edge ultra-low particulate air (ULPA) filtration with 40 mm standard NATO threading fitting. And they are getting impossible to find. These P3 certified biofilters work with our mask to provide unparalleled, long-lasting protection from airborne viral and bacterial threats. These filters are vastly superior to common N95 paper filters in practically every scenario.

## Key Features of the Filter:

- 40 mm x 1/7" NATO filter standard (EN 148-1:1999) threading
- P3-certified protection (according to EN 143:2000 standards) filters out 99.9999+% of biothreats including the coronavirus
- Lightweight (100g) construction
- Utilizes some of the highest quality ULPA filter construction that works on particles as small as 0.2 microns
- Prevents aerosol and airborne transmission of viral and bacterial threats
- 20-year shelf life for easy long-term storage

Particle filter  
P3 R

Corona Virus Proteccion

Dimensions: Ø x H	150 x 55 mm
Weight	100 g
Connection Thread	STANAG 4155 / EN 148-1 or GOST
shelf life	20 years
suitable for	H01, P3R, H03R

*Actual Cartridge*

## Maximum Protection from Pandemic & Biological Threats

The new MIRA Safety ParticleMax P3 Filter, with the high-quality mask we provide you can protect you from bacterial and viral threats—including widespread pandemics like Ebola, coronavirus (including COVID-19) and H1N1.

This effectively turns your ultra-secure mask into a respirator with the highest level of protection from airborne threats. Unlike common surgical masks and N95 paper masks, you'll get a perfect seal and full-face protection for your mouth and nose from the aerosol mutated virus.

Engineered using the latest in ULPA filtration technology, the same kind you'll find in "clean rooms" where semiconductors are manufactured. These P3 filters meet some of the highest standards in practically every metric.

They're made using special filtration media and grade 16 filter paper, resulting in a MERV rating of 20 (the highest attainable for air filtration quality). ULPA filters at this level are handcrafted using specially made fiberglass material, then pushed through a rigorous quality control process to ensure consistent quality across each and every filter.

They've also been subjected to extreme testing to ensure they'll filter out any and almost *all* environmental biothreats. The filter is even hydrophobic, so you can wear your mask in a decontamination shower without compromising your safety.

**We will provide you the filter and gas mask combo that's practically *impenetrable* for almost all of the world's biothreats.**

**Actual mask**

To infect you, viruses must enter your system through particulate or aerosol intrusion. Once you've got a perfect seal around your full face it is practically impossible for these threats to enter your body.

Do you really want to be running around town in a hazmat biological respirator and full face mask?

I think not.

This all started when I tried to get my millennials into a commercial version of the hazmat mask and face shield. I had a rebellion on my hands so I came up with slick solution. It's Ugly we are not wearing that. What the hell this is not a fashion show... It's your life. So I came up with cool.

## Motorcycle Sunglasses or COOL Biker Sunglasses

Actual Picture

These are IMPACT RESISTANT POLYCARBONATE LENSES – Polycarbonate is an impact resistant thermoplastic that is virtually unbreakable and extremely scratch resistant. Have you tried to break a CD (compact disc) before? It can't be done! CDs are made of polycarbonate. Your eyes are worth every penny you spend on sunglasses.

**BUILT FOR MOTORCYCLE RIDING:** There's nothing more important than protecting your eyes while you ride. These glasses wrap 180 degrees so they will stay on your head at high speeds and not wiggle. Built in sweat proof foam cushion will block out wind, dust and debris; as well as provide a nice snug fit. Shatterproof Impact Resistant Polycarbonate lenses stands up to bugs, debris and flying rocks.

**FOAM PADDED PROTECTION:** Sweat proof foam cushion protects your eyes from wind dust and debris while you are riding your motorcycle, skiing, working in the shop or even mowing the lawn. Foam Cushion also helps your glasses fit snug around your face so they won't fly off or wiggle at high speeds. Also great for the winter to seal out cold sub zero winds.

### ***Here is what happened***

Over the weekend I finished my research and realized that we are facing a life threatening situation here. Our paper N95 paper masks will not work. I immediately sent out the story with a blast to everyone.

Done deal. I bought large quantities for stock here and in my community which I received yesterday. Done Deal. The next thing I know the phone (Silent Circle) is ringing off the hook. No one can find supplies.

## **When we broke the story Masks and cartridges disappeared.**

I purchased the Rubber part of the respirators direct from the manufacturer. Who only sells in large quantities. I obtained the P3 R NATO 40mm screw in filter cartridges from a friend who supplies militaries. Not arms but medical supplies. And I bought all they had. The sunglasses the kids picked out because they are cool from Amazon.

### **One time exception**

Because I regard this as a matter of life and death I can supply you the complete kit. In the past when we had emergency supplies I sent them out free including thermometers, N95 masks and %SpO2 Oxymeters all free of charge. But I busted the bank. For last month I sent out to our Safe Life Medical supplier \$50,000. This has been going on month after month for a year now. And I busted the bank.

I really prefer you source these life saving supplies elsewhere. But if you cannot find what I regard as **a life saving respirator and specialized filter** I can send you the kit. You get the mask, **only filter that will work** and cool dude motorcycle sunglasses/goggles.

I sourced a LARGE quantity of what I call the Guarino masks and filters from suppliers in Europe. To be clear here the masks and filters are European made to hospital standards. Not cheap China shit, with the exception of the cool dude sunglasses from China.

The Price of the entire package is \$189 plus \$25 for expedited shipping. Please note supplies should ship next week. And when they are gone they are gone.

**This offer is only available to subscribers. I want you happy you can return anytime for a full refund. Including shipping! This is the real deal...**

**Call us at 866-924-0607 to secure your package NOW!**
